Employee Exposure Assessments / Industrial Hygiene Sampling

Why Have EAA Perform Your Industrial Hygiene Sampling?

We distinguish ourselves in several important areas.

This includes value to a client, the technology we use, report details, and confidentiality/privacy.

Value, Professionalism and Peace of Mind

- *The professional actually doing the work is a Certified Industrial Hygienist (CIH).*
- *We ensure accurate pre- and post-sample calibrations are performed.*
- *Samples are checked during use - where feasible - about every 30 minutes.*
- *Results are not time-weighted, which is more conservative when assessing exposures.*
- *We can sample for contaminants and chemicals in the air, water, or on work surfaces.*
- *Our contract Laboratory is accredited by the American Industrial Hygiene Association.*
- *The client can review and comment on the draft report.*
- *EAA's hourly rates are well below the industry average.*
- *Laboratory analysis fee markup is well below industry average.*

Technology Not Just for Technology's Sake

- *We use Apps designed for general sampling, direct-reading instruments, and indoor air evaluations.*
- *Custom Apps enhance a report with pictures, and information on things like PPE used.*
- *Calculations are done automatically for flow rates, total time, and total volume.*
- *No transcription errors - the laboratory submission form is automatically completed.*
- *Exposure values from the client, or chemical manufacturer, can be included.*
- *Reduced turnaround time, as Apps format data for inclusion in the final report.*

Confidentiality and Employee Privacy is Paramount

- *Summary reports for posting lacks personal information, such as employee name.*
- *PDF reports can be password-protected; we store reports in our secure data warehouse.*
- *Laboratory submission forms do not contain any client information.*
- *We never take a picture of an employee's face, unless requested in advance, in writing.*
- *Pictures would only be taken related to the workplace exposures being assessed.*
- *We will sign a confidentiality agreement, to allow electronic data collection.*
- *Your staff can review each picture, and inspect the photo album on the device.*

Everything You Need is in the Detailed Report

- *Reports include a summary for posting in employee common areas, like a break room.*
- *Personal sampling reports include a notification letter to employees sampled.*
- *Draft reports from direct-reading instruments can be issued within 24 hours; often on-site!*
- *All data is included in the report, such as calibration, notes on PPE, and photographs.*
- *Reports are sent as PDFs, we can provide raw data for import into your database.*
